Learning Ruby, one conversation at a time

<http://university.rubymendicant.com>

In this training....

You will...

- >> Be exposed to the fundamentals of Ruby's object system
- >> Fully understand four seemingly magical snippets of Ruby code.
- >> Write some code for a fun project, and get some personalized feedback

We will...

- >> Move at a brisk pace, but still answer questions as they come up.
- >> Not bore you with contrived* examples; we'll focus on real code.
- >> Try our best to adapt to your needs and interests.

We hope that...

- >> You will participate actively and share what is on your mind.
- >> You will be open to accepting constructive feedback from us from us and fellow participants in this training.
- >> You will share with the class your experiences with using Ruby for real projects. The more context you give us, the better we'll be able to help you learn.
- >> You won't get overwhelmed: If you're having trouble understanding something, there's a good chance others are too, so speak up!
